

A heatmap visualization showing the maximum probability $\text{Max } P(\theta, L, \Gamma)$ across 10 particles (x-axis) and 10 iterations (y-axis). The color scale ranges from 0.00 (dark purple) to 0.30 (yellow). The plot shows a diagonal band of higher probability values, indicating that the maximum probability is generally achieved for particles and iterations that are close to each other. The highest values (yellow) are concentrated along the main diagonal, particularly for particles 1, 7, and 8.
