

A heatmap visualization showing the maximum probability $\text{Max } P(\theta, L, \Gamma)$ (Y-axis) as a function of the number of particles (X-axis, 0 to 10) and the number of iterations (Y-axis, 0 to 10). The color scale ranges from 0.00 (dark purple) to 0.30 (yellow). The plot shows a diagonal band of higher values, indicating that the maximum probability is highest when the number of particles and iterations are both low, and decreases as the number of particles increases.
